CHAMPION Quantum Heat Transfer Oils are premium industrial oils designed to provide corrosion protection and lubricity as a process oil, to provide excellent thermal and oxidative stability as circulating oil, and to provide faster cool times in quenching operations.

These oils are blended with high-quality hydrocracked mineral base oils providing for better stability, better low-temperature performance, lower volatility and higher flash points than similar solvent-refined oils. These oils should be used in open systems with bulk oil temperatures of less than 160°C and closed systems with bulk oil temperatures of less than 280°C.

PART# 4218 - ISO 32
PART# 4223 - ISO 22

Available in:
4218AN - 55 Gallon
4223AN - 55 Gallon
